Art Unit: 3694

#### **DETAILED ACTION**

## Specification

1. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The

Application/Control Number: 10/627,626

Art Unit: 3694

disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it contains more than 150 words. Correction is required. See MPEP § 608.01(b).

#### **Drawings**

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. It is not seen wherein the figures set forth the method of claim 1. Therefore, the method of claim 1 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 3694

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim 1 sets forth that the portfolio is transmitted over a network in response to a single click. It is not seen wherein the specification sets forth exactly how and in what manner such is accomplished, nor what all is meant and encompassed by said limitation.

6. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 10/627,626

Art Unit: 3694

a. The preamble of the claim sets forth the limitation "implementing a portfolio". The limitation "implementing" is vague and indefinite in that the claim fails to set forth how and in what manner the portfolio is "implemented", nor what

Page 5

all is meant and encompassed by the limitation "implemented"

b. Claim 1 is vague and indefinite in that the claim can be performed by a person, which is non statutory matter. The current claim language does not concisely set forth or make clear that it is a computer doing the work.

c. Claim 1 is vague, indefinite and incomplete in what all is meant and encompassed by the limitation "single click". For example, the claim fails to set forth in a clear and concise manner what exactly is a "single click", which click is considered to be the "single click", which and or whose mouse is used to click and when said click is clicked, etc. The current claim language is very broad and does not specifically read on anything, per se. It is respectfully requested that applicant amend the claim to more directly reflect the inventive concept.

## Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

7. Claim 1 is rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility and is directed towards no statutory matter.

The claim does nothing useful. That is the claim merely sets forth a

not seen wherein any useful action takes place.

Further, the instant claim limitations do not specifically require the actions to be performed by a computer and read on an actual person performing said actions, that is, a secretary may be doing the selecting and transmitting because the boss single clicked "send" on an email message to said secretary to perform said action.

method for selecting and transmitting a portfolio in response to a single click. It is

## **Double Patenting**

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Page 7

9. Claim 1 is provisionally rejected on the ground of nonstatutory double patenting over claim 1 of copending Application No. 10/627,873. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: the act of transmitting the portfolio over a computer network in response to a single click is synonymous with the limitation "Storing each investors portfolio in a central database" as the portfolios would indeed be transferred on the single click of the save button.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

#### Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. Claim1 is rejected under 35 U.S.C. 103(a) as being unpatentable over notoriously old and well known common knowledge.

Claim 1 sets forth a method, wherein something is selected and transmitted over a computer network in response to a single click of a mouse. This is analogous to the save button in the tool bar of Microsoft Word. That is, the limitation "transmitting... over a network... in response to a single click." Is notoriously old and well known as the "save" or "send" function set forth in basic computer connectivity. It is immaterial that applicant has directed the invention to "portfolios" as a "portfolio" when it is transmitted over a network is no different than any other piece of information or file. "Portfolio" is merely descriptive language that does not affect the function of the basic network itself.

Accordingly, since the method of using a single click to transmit data is previously old and well known, at the time of the invention it would have been obvious to one of ordinary skill in the art to utilize said old and well known technique to transmit **any data** desired over a computer network, including a portfolio.

# 12. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,393,409 B2 to Young et al. (hereinafter Young)

Young sets forth a method for implementing a portfolio of investments in a single transaction by a user comprising the steps of:

Selecting a portfolio of investments from a plurality of potential investments options and

Application/Control Number: 10/627,626 Page 9

Art Unit: 3694

Transmitting the portfolio over a computer network in response to a single click of a mouse by a user in, for example, the Abstract, Figures 2-4, column 1 lines 1-45, column 3 lines 50-67, column 4 lines 1-23, column 5 lines 5-33, etc.

#### Conclusion

- 13. Examiner's Note: The Examiner has cited particular columns and line numbers in the references as applied to the claims for the convenience of the applicant.

  Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant, in preparing the responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.
- 14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel L. Greene Jr. whose telephone number is (571) 272-6876. The examiner can normally be reached on Mon-Fri 8:30am 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James P. Trammell can be reached on (571) 272-6712. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
